MAPS - types U.S.A.

GPS is a system of more than 30 satellites circling the earth that are constantly sending out signals, helping us to figure out where we are and the best way to get to our destination... including avoiding traffic!

Maps are also created to show information other than roads & highways. Political maps show cities, state & country boundaries. Physical maps show the geography - water, mountains, deserts... thematic maps focus on a specific theme such as biospheres, climate, population, land use, time zones, endangered species, religions, sports teams, natural hazards. Historical maps depict how places have changed over time.

Make 2 different maps of USA. What is a topic that is interesting to you? Dinosaur sites? If you like sports you can mark which teams represent a state or region. Do you like to hike? You can mark where national parks are (29 states have them.) Have fun!
